

Automated Problem and Solution Generation Software for Computer-Aided Instruction in Elementary Linear Circuit Analysis

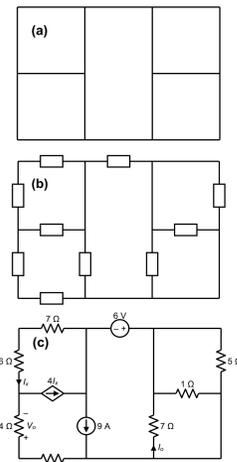

C. D. Whitlatch, Q. Wang, and B. J. Skromme

School of Electrical, Computer, and Energy Engineering, Arizona State University, Tempe, AZ 85287-5706

Motivation

- Linear circuit analysis is a foundational topic in electrical engineering, and is frequently also required of nonmajors, for whom it may be most or all of their exposure to electrical engineering
- Students frequently struggle with such courses for several reasons, in our opinion:
 - Misconceptions about electricity coming into course, which may be frequently unrecognized by instructors¹
 - Insufficient interactive activities
 - Delayed feedback on homework and assessments
 - Lack of sufficient worked examples to lead students gradually up to the level of homework problems
- This project aims to develop and rigorously assess novel cyberlearning tools to improve student mastery of this subject through practice in a highly interactive system capable of providing immediate, accurate, and highly relevant feedback regarding errors to both the students and their instructors
- Special problem types to focus on qualitative understanding and typical student misconceptions will be included
- Software can be used in many ways, to generate automatically gradable homework sets and exams, interactive exercises for use during class, textbook problems & examples, and in a full tutorial system designed to supplement conventional instruction
- Tutorial system is being developed to use these tools, adapting to individual student needs and providing real-time feedback to instructors regarding student difficulties

Three-step Process for Circuit Generation

Circuit Generation Procedure

- Circuits are generated as layouts, not netlists, since beginning students may not recognize the equivalence of circuits laid out differently, and specifying layouts guarantees planar circuits suitable for mesh analysis
- All circuits are laid out on a square grid of points for convenience; any planar circuit can be represented this way
- Randomly placing circuit elements on a grid and then checking them for validity is not a workable approach for anything other than very small circuits; the number of possibilities is vast and only a tiny fraction are valid
- We therefore use a three-step process for circuit generation, using special algorithms at each stage designed to maximize the probability of circuits being valid
- First step involves placing "shorts" and "opens" on the square grid; opens always stay open, but some of the shorts are later changed to circuit elements [Fig. 1(a)].
- Second step changes the required number of shorts into generic circuit elements, which are later changed to specific elements [Fig. 1(b)]
- Third & final step changes the generic elements into specific circuit elements, assigns values and polarities, control variables for dependent sources, and gains [Fig. 1(c)]¹⁰

Pedagogical Feature: Relating Terms in KCL Equation to Currents Leaving a Supernode

Problem #1
Circuit Diagram with Node Analysis
Compute the following 2 quantities for this circuit:
 V_1 , I_4

Each colored arrow corresponds to a term in KCL equation #3 of 3.

Voltage constraint equations:
 $V_1 = 3V_2$
 $V_3 = V_4 = 5V$

KCL equations for each node or supernode:
Node 1: $I_1 - I_2 - I_3 = 0$
Node 2: $I_2 - I_4 - I_5 = 0$
Node 3: $I_3 - I_6 = 0$
Node 4: $I_4 - I_7 = 0$
Node 5: $I_5 - I_8 = 0$
Node 6: $I_6 - I_9 = 0$
Node 7: $I_7 - I_{10} = 0$
Node 8: $I_8 - I_{11} = 0$
Node 9: $I_9 - I_{12} = 0$
Node 10: $I_{10} - I_{13} = 0$
Node 11: $I_{11} - I_{14} = 0$
Node 12: $I_{12} - I_{15} = 0$
Node 13: $I_{13} - I_{16} = 0$
Node 14: $I_{14} - I_{17} = 0$
Node 15: $I_{15} - I_{18} = 0$
Node 16: $I_{16} - I_{19} = 0$
Node 17: $I_{17} - I_{20} = 0$
Node 18: $I_{18} - I_{21} = 0$
Node 19: $I_{19} - I_{22} = 0$
Node 20: $I_{20} - I_{23} = 0$
Node 21: $I_{21} - I_{24} = 0$
Node 22: $I_{22} - I_{25} = 0$
Node 23: $I_{23} - I_{26} = 0$
Node 24: $I_{24} - I_{27} = 0$
Node 25: $I_{25} - I_{28} = 0$
Node 26: $I_{26} - I_{29} = 0$
Node 27: $I_{27} - I_{30} = 0$
Node 28: $I_{28} - I_{31} = 0$
Node 29: $I_{29} - I_{32} = 0$
Node 30: $I_{30} - I_{33} = 0$
Node 31: $I_{31} - I_{34} = 0$
Node 32: $I_{32} - I_{35} = 0$
Node 33: $I_{33} - I_{36} = 0$
Node 34: $I_{34} - I_{37} = 0$
Node 35: $I_{35} - I_{38} = 0$
Node 36: $I_{36} - I_{39} = 0$
